

Monthly Economic Survey

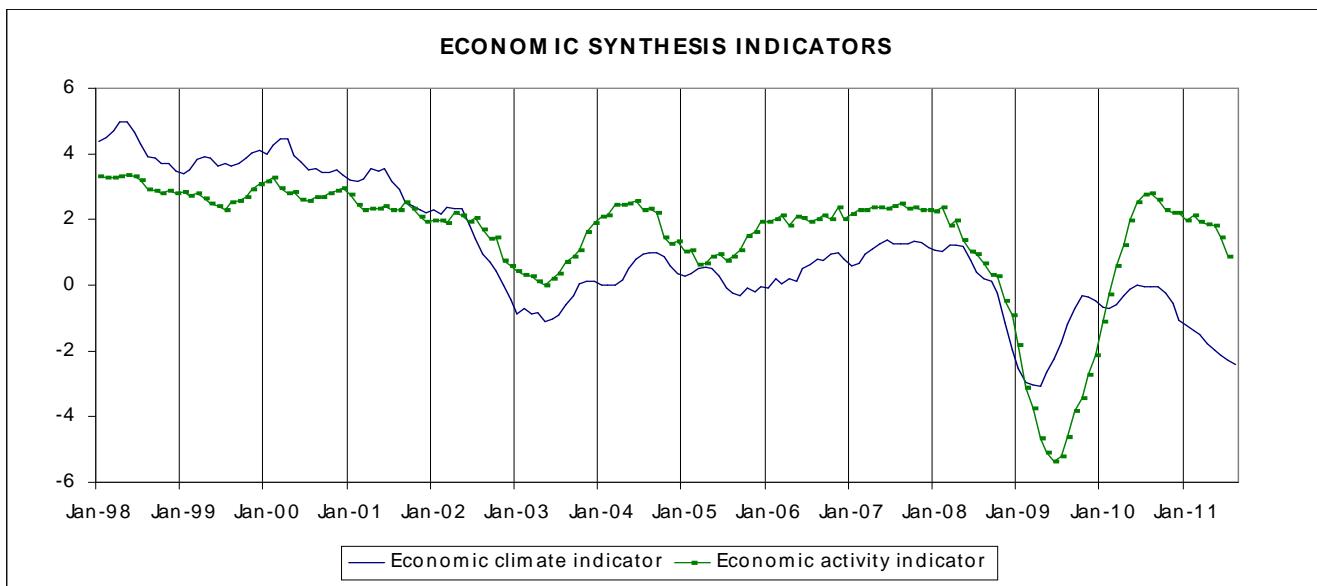

August 2011

Private consumption and investment indicators diminish more intensely in July. Exports of goods continue to record a strong nominal growth rate, although decelerating relatively to June.

In August, the economic sentiment and the consumer confidence indicators diminished significantly in the Euro Area (EA) and in the European Union (EU27).

In Portugal, the economic climate indicator maintained in August the intense downward movement started in July 2010. The economic activity indicator, available until July, intensified the descending path observed since September 2010. The private consumption indicator diminished in July, reflecting the negative contribution of both components, durable and non-durable consumption, stronger in the second case. In the same month, the Gross Fixed Capital Formation (GFCF) indicator presented a more intense reduction, due to the more negative contribution of all components, mainly of construction. Concerning the international trade of goods, in July, exports continued to record a strong year-on-year nominal growth rate, of 14.9% (17.5% in June), while imports registered a nominal change rate of 0.2% (1.9% in the previous month).

In August, the year-on-year change rate of the Consumer Price Index (CPI) was 2.9% (3.2% in July). In the same month, excluding energy and unprocessed food products, this rate was 1.8% (2.1% in the previous month). The prices of the goods and of the services components presented year-on-year growth rates of 3.1% and 2.6% in August (3.6% and 2.5% in July), respectively. The differential between the change rate of the Portuguese Harmonized Index of Consumer Prices (HICP) and of the EA HICP diminished 0.2 p.p. in August, to 0.3 p.p..

**Report based on information available up to September 16, 2011.
Next report will be released on October 20, 2011.**

NOTES

With exception of situations duly identified, the values presented in tables and graphs and others that also serve for the analysis are, in the case of quantitative series, year-on-year rates of change (y.r.) under three-month moving average (3-mma) or, in the case of qualitative series, 3-mma of seasonally adjusted values (s.a.) or of effective values (e.v). Annual information correspond to 12-mma, with the exception of variables presented as y.r. on stocks, where the annual value corresponds to the variation of the balance at the end of the year. Annualised variation (a.v.). Weight (w.).

Balances: differences between the percentage of respondents giving positive and negative replies.
