

## MONTHLY ECONOMIC SURVEY

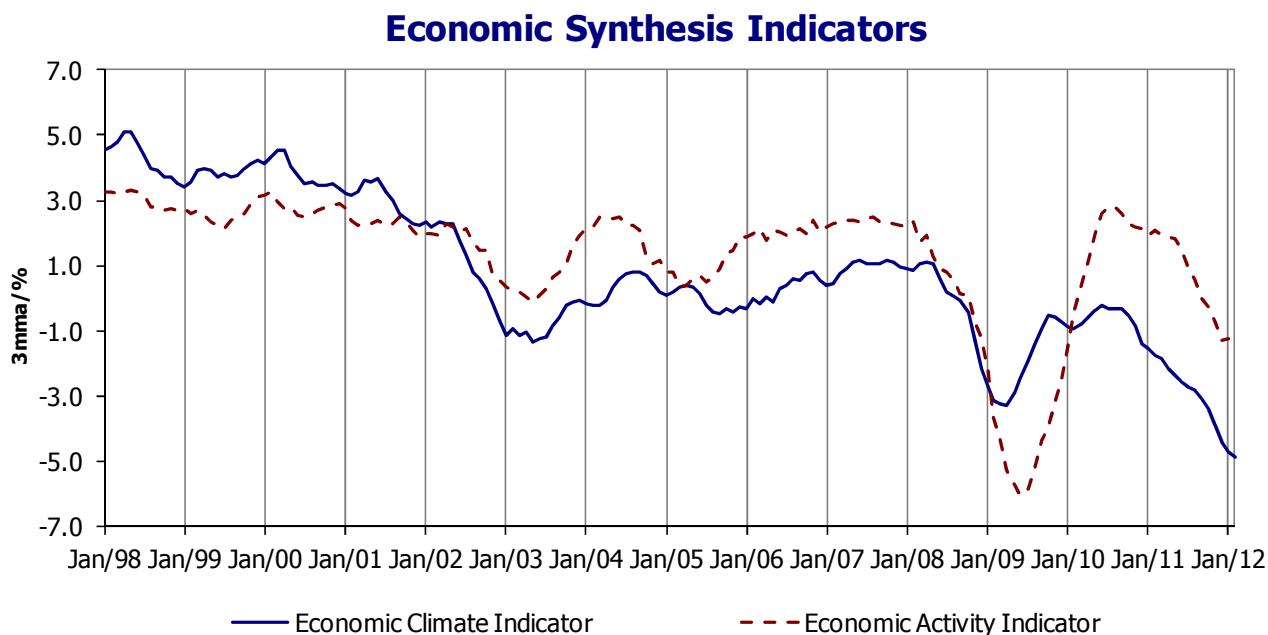

### February 2012

#### **Private consumption and investment decrease less intensely in January. Nominal imports of goods diminish and exports maintain a high year-on-year growth rate.**

In February, the economic sentiment and the consumer confidence indicators suspended the previous downward movements in the Euro Area (EA). In the same month, the raw materials and oil prices presented monthly change rates of 2.8% and 5.2% (4.6% and 4.8 in January), respectively.

In Portugal, the economic climate indicator slightly decreased in February, maintaining the downward movement started in October 2010. The economic activity indicator, available until January, interrupted the descending path observed since September 2010. The private consumption indicator presented a less intense reduction in January, reflecting the lower negative contribution of current consumption. In the same month, the Gross Fixed Capital Formation (GFCF) indicator also diminished less intensely, as a result of the less negative evolution of the construction component. Concerning the international trade of goods, in nominal terms, exports and imports registered year-on-year change rates of 10.9% and -7.0% in January (11.9% and -10.2% in the previous month), respectively.

The year-on-year change rate of the Consumer Price Index (CPI) shifted from 3.5% in January to 3.6% in February. The goods and the services components of CPI presented year-on-year growth rates of 3.7% and 3.4% in February (3.9% and 2.8% in January), respectively. Excluding energy and unprocessed food products, the CPI registered a year-on-year growth rate of 2.2% in February (2.1% in the previous month). The differential between the year-on-year change rate of the Portuguese and the EA Harmonized Index of Consumer Prices (HICP) was 0.9 p.p. in February, 0.2 p.p. more than in the previous month.

**Based on information available up to March 16, 2012.**

## NOTES

With exception of situations duly identified, the values presented in tables and graphs and others that also serve for the analysis are, in the case of quantitative series, year-on-year rates of change (y.r.) under three-month moving average (3-mma) or, in the case of qualitative series, 3-mma of seasonally adjusted values (s.a.) or of effective values (e.v). Annual information correspond to 12-mma, with the exception of variables presented as y.r. on stocks, where the annual value corresponds to the variation of the balance at the end of the year. Annualised variation (a.v.). Weight (w.).

Balances: differences between the percentage of respondents giving positive and negative replies.
