

House Price Index 2nd Quarter of 2017

House prices up by 8.0% on a year before

The Housing Price Index (HPI) increased 8.0% in the second quarter of 2017 when compared with the same period of the previous year, one tenth of a percentage point more than in the first quarter of 2017.

The prices of new dwellings exhibited a year-on-year rate of change of 5.4%, 1.2 percentage points (p.p.) above what was recorded in the previous quarter. This was the second consecutive period in which the transaction prices for new dwellings accelerated. This contrasts with the evolution observed for existing dwelling transactions, whose year-on-year rate of change moved from 9.2% (first quarter of 2017) to 8.9% (quarter under review). In relation to the previous period, the HPI increased 3.2%, a rate similar to what was registered for existing and new dwelling transactions (3.2% and 3.3%, respectively).

A total of 36 886 dwellings were transacted between April and June 2017, 16.1% more than in the same period of the previous year and 4.9% more when compared with the first quarter of the current year. In the period under review, the total sales value was approximately 4.6 billion Euros, of which almost 3.7 billion were of existing dwelling transactions.

1. House Price Index

In the second quarter of 2017, the HPI increased 8.0% when compared with the same period of the last year, 0.1 percentage points (p.p.) more than in the previous quarter. This slight acceleration was justified by the behaviour of new dwelling prices, which increased 5.4%, 1.2 p.p. more than in the previous quarter. For the first time since the last quarter of 2015, existing dwelling prices registered a decrease in the year-on-year rates of change (8.9% in the second quarter of 2017 and 9.2% in the first quarter of 2017).

On a quarter-to-quarter basis, the HPI rose 3.2% (2.1% in the first quarter of 2017). This was the second consecutive quarter in which an acceleration of prices was noted, which was more significant for new dwellings (3.3% against 0.8% in the first quarter of 2017) than for existing dwellings (3.2% in the second quarter and 2.5% in the first quarter of 2017).

Between April and June 2017, the rolling 4-quarter rate of change of the HPI reached 7.8%, a new maximum of the available series. In the quarter under review, the rolling 4-quarter rate of change of existing and new housing was 9.1% and 4.2%, respectively.

2. Number and value of house sales

In the second quarter of 2017, the house sales indicator totaled 36,886 transactions. For the third consecutive quarter, the number of quarterly sales constituted a maximum of the available series.

The second quarter of 2017 recorded 5,118 more dwelling transactions than the first quarter of 2017 (an increase of 16.1%). The sales of existing dwellings reached 31,150 units, representing a year-on-year increase of 18.3%, the lowest rate of change since the last quarter of 2014. New dwellings, which represented 15.6% of total transactions, accelerated from 2.9% to 5.5%.

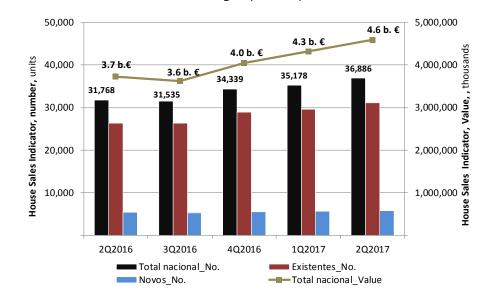

In comparison with the previous quarter, the number of house sales rose 4.9%, more than the double than in the first three months of the year (2.4%). This result was mainly influenced by the behaviour of the sales of existing dwellings, which increased by 5.6%, more 4.4 p.p. when compared to the variation observed for new dwellings.

The second quarter of 2017 was the third consecutive quarter where the total value of transacted dwellings reached a new maximum (4.6 billion Euros). The house sales value increased 23.3% when compared with the same period of the last year, and 6.3% in relation to the preceding quarter.

The following figure depicts the evolution of the number and value of sales over the last five quarters.

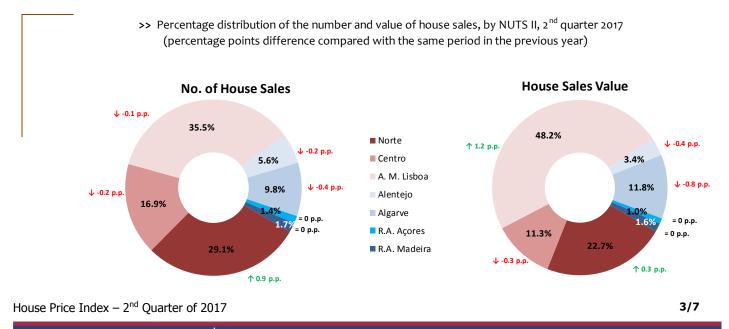

>> House Sales Indicator, number and value, All-dwellings, Existing and New Dwellings 2Q2016 - 2Q2017

Between April and June 2017, the Área Metropolitana de Lisboa, together with the Norte region and the Algarve, registered the highest regional housing sales numbers in the available series (with 13,111, 10,752 and 3,621 transactions, respectively). The Área Metropolitana de Lisboa sold for the first time more than 13,000 properties in a single quarter. The Norte region, the only to present an increase in the regional share of transactions (+ 0.9 p.p.) observed, for the second consecutive quarter, more than 10,000 transactions.

As in the previous quarter, the sales value in the Área Metropolitana de Lisboa exceeded the 2 billion Euros (48.2% of total transacted value). The Norte region, with a value of sales that slightly surpassed the billion Euros, was the region that, together with the Área Metropolitana de Lisboa (+1.2 p.p.), increased its regional relative share (+0.3 p.p.).

The next figure shows the distribution of the number and value of house sales by NUTS II region for the second quarter of 2017.

EXPLANATORY NOTES

House Price Index

The House Price Index (HPI) measures the evolution of the acquisition prices of the dwellings purchased in the residential market in Portugal. The HPI is compiled using anonymised fiscal administrative information provided by the Tax and Customs Authority on the Municipal Property Transfer Tax (IMT) and the Municipal Property Tax (IMI).

The HPI is derived through the estimation of a functional relationship between the logarithm of the transaction prices of dwellings and their characteristics (e.g., area, location), being included in the probabilistic models of hedonic prices. The estimation is performed quarterly with data from two adjacent quarters. With this approach, it is possible to estimate the rate of change of prices controlling for changes in the quality of dwellings.

The HPI is a chained index with base 100 = 2015. The followed methodology enables the weighting structure to be updated annually with information on the value of dwelling transactions in the year immediately preceding the year in which the index refers.

Quarterly rate

The quarterly rate is the change in the index of a certain quarter compared with the index of the previous quarter expressed as a percentage. Although up-to-date, this measure can be affected by seasonal and other effects.

Annual rate

The annual rate is the change in the index of a certain quarter compared with the index of the same quarter in the previous year expressed as a percentage. In the presence of a stable seasonal pattern, seasonal effects do not influence this measure.

4-quarter average rate

The rolling 4-quarter average rate is the change in the average index of one year compared with the average index of the previous year expressed as a percentage. This moving average is less sensitive to transient changes in prices.

New dwellings

Dwellings that, at the time of the transaction, had never been used for residential purposes.

Existing dwellings

Dwellings that, at the time of the transaction, had already been used for residential purposes.

House Sales Indicator

Indicator that estimates the number of housing transactions carried out in a quarter for the national total and the segments of new homes and existing homes. The compilation of this statistic is based on information from the IMT and is based on transactions of urban articles. In calculating this indicator are not considered, similarly to what happens with the estimation of the rate of change in prices between two successive quarters, transaction parts of dwellings (i.e., are considered only transactions of dwellings in full).

The number of sales is available for the whole country and for the second level of geographical breakdown, as defined by the Nomenclature of Territorial Units for Statistics (NUTS II).

House Value Indicator

As the indicator of the number of sales, this statistic is based on information taken from the IMT on paid real estate tax. Following what was defined for the house sales indicator, the total value of transactions does not cover transactions of parts of dwellings.

The value of sales is also available to the second level of geographical breakdown, as defined by NUTS II.

Additional information

Further methodological information on the HPI is available on the National Statistics Institute website <u>http://smi.ine.pt/DocumentacaoMetodologica/Detalhes/1464</u>; available only in Portuguese).

Next press release

The HPI of the 3rd quarter of 2017 is expected to be released on December 20th, 2017.
