

Environmentally related taxes and fees 2016

Environmentally related taxes represented 7.5% of total revenue from taxes and social contributions, in 2016

In 2016, the value of environmentally related taxes was 4.796 billion euro, representing 7.5% of total revenue from taxes and social contributions (7.0% in 2015). That value corresponds to an increase of 10.5% compared to 2015, higher than the increase observed for total revenue from taxes and social contributions (+2.8%).

According to information available for 2015, in Portugal, the share of environmentally related taxes in total revenue from taxes and social contributions was higher (7.0%) than the EU28 average (6.3%).

Statistics Portugal publishes data for environmentally related taxes and fees for the year of 2016. "Environmentally related tax" means a tax whose tax base is a physical unit (or a proxy of a physical unit) of something that has a proven, specific negative impact on the environment, and which is identified in ESA 2010 as a tax.

This information, consistent with the Portuguese National Accounts (Base 2011), is transmitted annually to Eurostat under the Regulation (EU) No 691/2011 of the European Parliament and of the Council, of 6 July 2011, on European environmental economic accounts.

This year's exercise includes two methodological changes. The first is related to the classification of the fee for the use of public water domain as a pollution tax. Previously, this tax was under the category of resource taxes. The second change is related to the estimation of fees for solid waste collection, treatment and disposal and for fees for wastewater collection, treatment and management. Its scope has been widened (see methodological notes) leading to changes in the complete series for environmentally related fees.

International comparability is presented at the European level for 2015, the latest year for which this information is available.

This press release is organized into two distinct parts: environmentally related taxes and environmentally related fees.

Environmentally related taxes

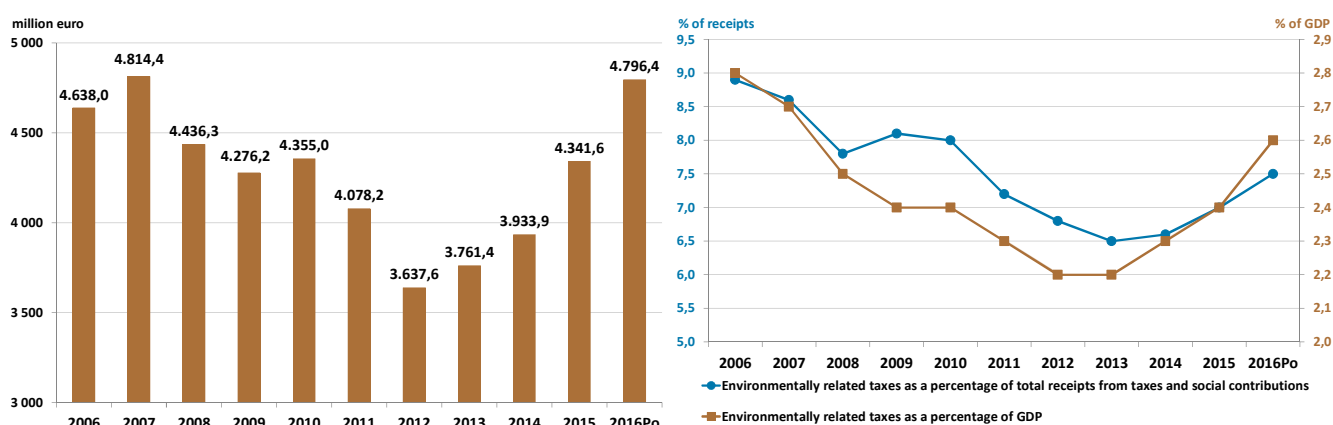

In 2016, the value of these taxes was 4.796 billion euro, registering an increase of 10.5% comparing to 2015. The revenue from this type of tax increased for the fourth consecutive year.

The increase of 10.5% was higher than the increase of total revenue from taxes and social contributions (change of +2.8%), resulting in a gain of the relative importance of environmentally related taxes in the Portuguese tax structure.

The revenue from the tax on oil and energetic products, the tax on motor vehicle sales and the single circulation tax represented, in 2016, around 97% of all environmentally related taxes. By the same order, the revenue from those taxes increased 11.2%, 17.5% and 4.5%, comparing with the previous year.

Regarding the indicator "Environmentally related taxes as a percentage of GDP", its value stood at 2.6%, in 2016.

Figure 1 - Total environmentally related taxes

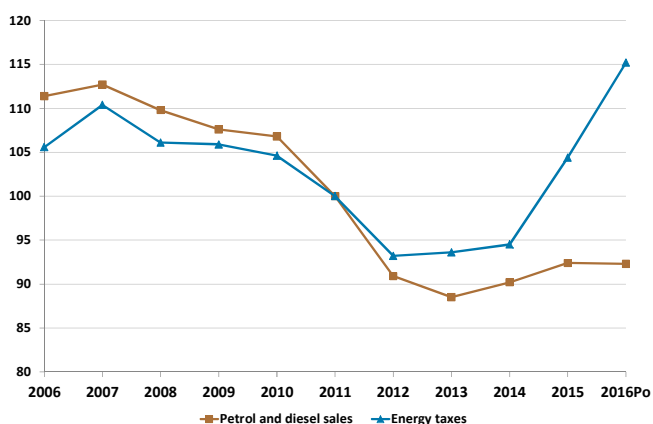

Since environmentally related taxes are essentially comprised by three taxes - tax on oil and energetic products, tax on motor vehicle sales and single circulation tax, it is relevant to analyse the performance of those taxes, given the behaviour of the respective tax base.

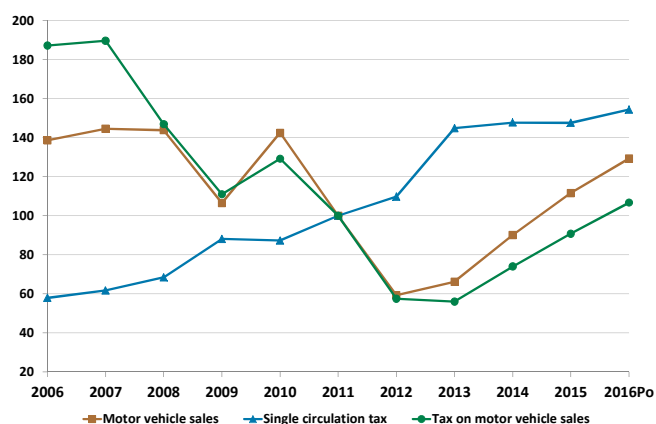

The evolution of energy taxes was, in general, similar to petrol and diesel sales, in volume terms, until 2014. From 2015, there was a deviation (figure 2, left) explained by a significant rise in tax rates, as well as the introduction of a new tax component related to CO₂ emissions.

Regarding transport taxes, motor vehicle sales and tax on motor vehicle sales show a similar behaviour. On the opposite side, the single circulation tax, which focuses on the existing stock of vehicles, presents a growth for the total series. This behaviour is mainly explained by the car taxation reform, which entered into force in 2007, and increased taxation over the vehicle's lifetime.

Figure 2 – Evolution of fuel and motor vehicles sales and their respective taxes

Source of data on petrol and diesel sales: Directorate-General of Energy and Geology

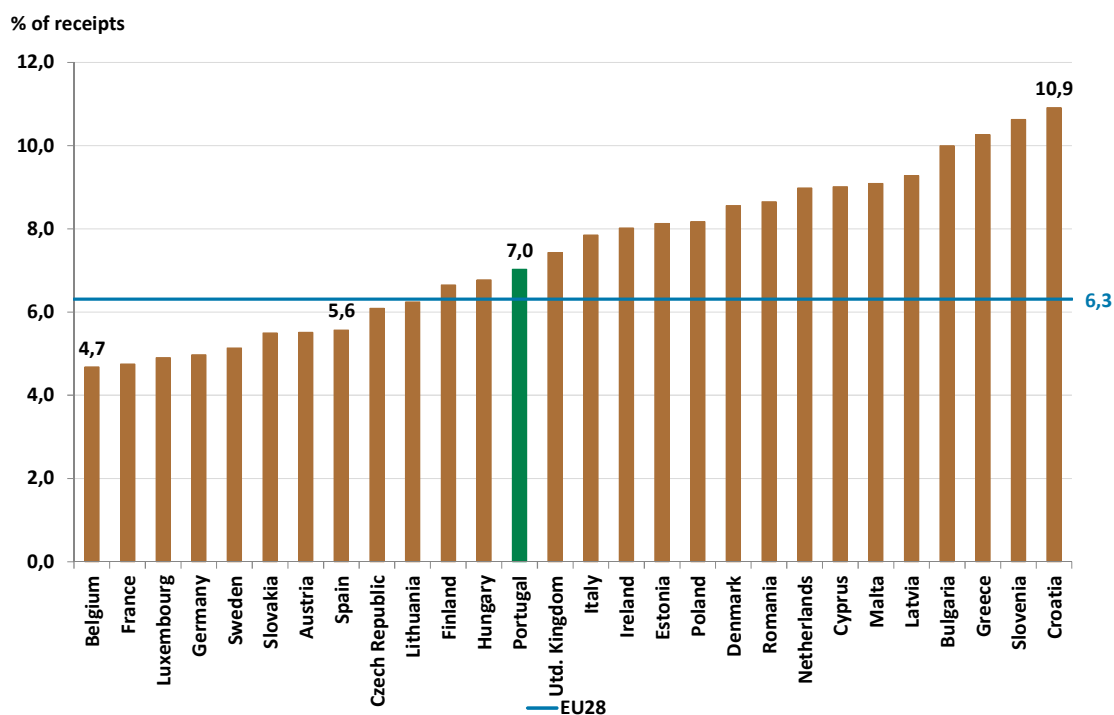

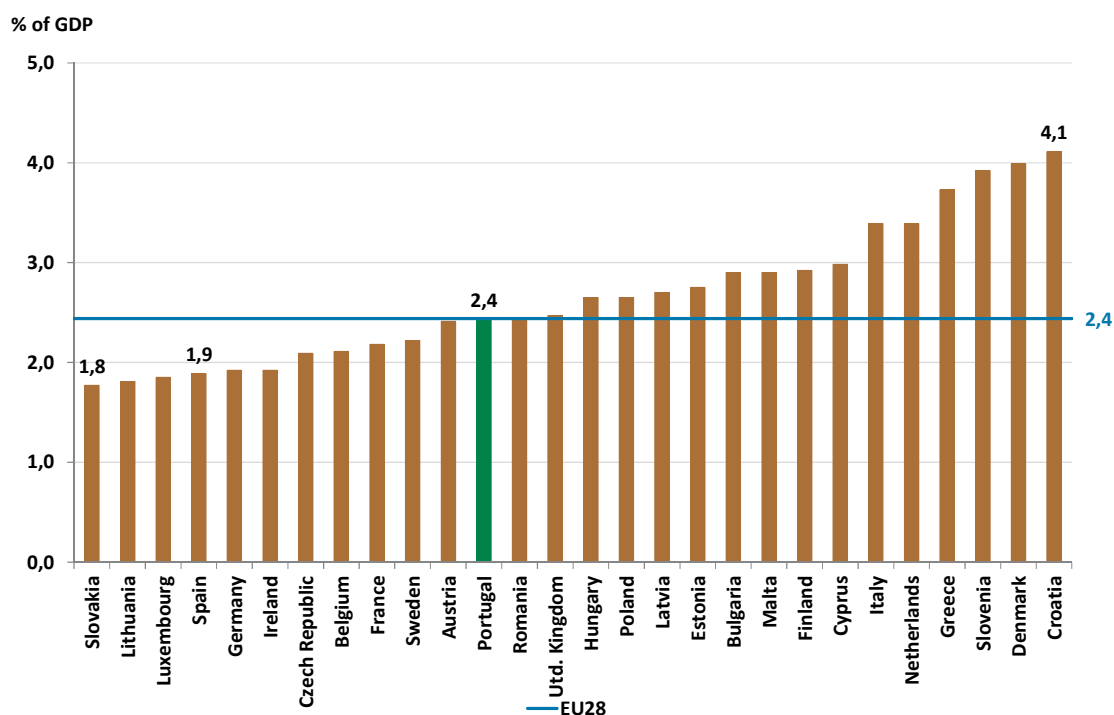

Source of data on motor vehicle sales: ACAP – Portuguese Vehicle Sales Association

Comparing with other European Union countries, in 2015, “Environmentally related taxes as a percentage of total revenue from taxes and social contributions”, in Portugal, registered a value of 7.0%, which is higher than the EU28 average of 6.3%.

Regarding “Environmentally related taxes as a percentage of GDP”, Portugal registered a value of 2.4%, which was in line with EU28 average.

Figure 3 - Environmentally related taxes as a percentage of total receipts from taxes and social contributions and as a percentage of GDP, in European Union countries, in 2015

Environmentally related fees

In 2015, the last year for which this information is available, environmentally related fees amounted to 1.404 billion euro (0.8% of GDP) an increase of 5.3%, compared to 2014, mainly explained by higher revenues from fees for solid waste collection, treatment and disposal and from fees for solid waste collection, treatment and disposal.

Fees for solid waste collection, treatment and disposal and for wastewater collection, treatment and management accounted for 90% of total revenue collected from environmentally related fees, in that year.

Regarding integrated waste management systems based on an ECOVALUE rate, the revenues returned to its downward movement (-5.9%, compared to 2014) and can be explained by less revenues collected by the Green Dot system.

Table 1 - Environmentally related fees, between 2006 and 2015

unit: million euro

FEE DESCRIPTION	2006	2007	2008	2009	2010	2011	2012	2013	2014	2015
Pollution fees	921,332	1 084,686	1 160,319	1 139,429	1 264,950	1 294,351	1 264,887	1 279,246	1 310,114	1 387,183
Fees for solid waste collection, treatment and disposal	442,521	517,442	563,861	521,122	567,548	556,711	542,629	532,459	547,364	600,578
Fees for wastewater collection, treatment and management	396,386	454,361	480,658	504,098	549,427	589,667	600,366	629,160	642,470	669,041
Fee for the recycling and disposal of packages (glass, cardboard, plastic, metal and wood)	50,376	65,834	64,251	59,630	87,185	89,090	72,472	69,003	71,466	66,363
Fee for the recycling and disposal of pharmaceutical and plant protection products	1,825	1,857	1,935	1,852	2,035	2,165	2,054	1,984	2,043	2,118
Fee for the recycling and disposal of used lubricating oils	5,588	5,679	5,632	4,996	5,156	4,666	3,878	3,997	4,202	3,502
Fee for the recycling and disposal of tyres	8,673	9,123	10,540	9,965	10,369	9,081	8,235	9,994	11,266	11,760
Fee for the recycling and disposal of old motor vehicles	0,250	0,246	0,245	0,248	0,274	0,579	0,416	0,417	0,436	0,425
Fee for the recycling and disposal of electrical and electronic equipments	10,930	22,458	22,517	21,126	22,555	17,966	11,521	10,285	9,378	8,744
Fee for the recycling and disposal of batteries and accumulators	2,464	2,459	1,413	1,591	2,020	1,682	1,569	1,579	1,548	1,472
Waste management fee	//	3,055	6,593	11,941	15,732	18,131	17,301	15,889	15,966	19,124
Fee for collection of corpses of dead animals on the farm	2,319	2,172	2,674	2,860	2,649	4,613	4,446	4,479	3,975	4,056
Resource fees	0,093	//	//	8,060	22,783	15,215	32,525	27,690	23,177	16,502
Fee for the use of water resources	//	//	//	8,060	22,783	15,215	32,525	27,690	23,177	16,502
Fee for boiling springs management	0,093	//	//	//	//	//	//	//	//	//
Total environmental related fees	921,425	1 084,686	1 160,319	1 147,489	1 287,733	1 309,566	1 297,412	1 306,936	1 333,291	1 403,685

Methodological notes

Taxes consist of compulsory, unrequited payments, which are levied by general government. The term “unrequited” means in this context that government provides nothing directly in return to the individual unit making the payment, although they might use the funds to provide goods and services to other units or to the community as a whole.

Environmentally related taxes

Environmentally related tax statistics record data on revenues raised by governments from taxation on products and services with a negative impact on the environment. Thus, all taxes levied on these tax bases are environmentally related taxes (this definition is in agreement with Eurostat’s publication – Environmental taxes – A statistical guide, from 2013).

The value added tax (VAT) is excluded from the definition of environmentally related tax. This is mainly because VAT is a neutral tax (with few exceptions) since it is deductible for industries but not for households. Therefore, it does not influence relative prices in the same way as an environmentally related tax does.

Alcohol, tobacco and similar consumption taxes should also not be included in environmental tax statistics, since they are not considered to be specifically negative for the environment.

The source of information is table 9 of the national accounts (ESA 2010) transmission programme – Regulation (EC) n. 5492/2013 of the European Parliament and of the Council, of 21 May 2013, which details tax and social contribution receipts by type of tax and social contribution and receiving sub-sector.

According to ESA 2010, there are three main categories of taxes:

- Taxes on production and imports (D.2);
- Current taxes on income, wealth, etc. (D.5);
- Capital taxes (D.91).

For analytical purposes, the environmentally related taxes can be classified into four main categories:

- Energy taxes – this group includes taxes on energy products (petrol, diesel, fuel oil, natural gas, coal and electricity), as well the proceeds from emission permits recorded as taxes in the national accounts.
- Transport taxes – this group mainly includes taxes related to the ownership and use of motor vehicles. Taxes on other transport equipment – planes or ships – are also included here, when they conform to the general definition of environmentally related taxes. The transport taxes may be a single tax related to imports or sales of the equipment or recurrent taxes such as an annual road tax.
- Pollution taxes – this group includes taxes on measured or estimated emissions to air and water, management of solid waste and noise.
- Resource taxes – this group includes taxes linked to the extraction or to the use of natural resources, such as oil and gas, water, forests, wild flora and fauna, etc., as these activities deplete natural resources.

Environmentally related fees

The difference between a tax and a fee is on the way General Government uses the receipts. If the amounts collected are used to issue licences to organise some proper regulatory function (such as checking the competence or qualifications of the entity concerned or the promotion of management systems in areas that have a tendency to generate negative externalities), these payments should be treated as purchases of services from government (P.11, in ESA 2010) rather than payment of taxes, unless the payments are clearly out of all proportion to the cost of providing the services. Some examples are garbage disposal fees or wastewater collection, treatment and management fees.

Generally, the value of the fees is determined by the revenue charged by the entity that is legally responsible for the assessment and collection of the fee. However, given the complexity of waste and wastewater management activities, the amount of revenue collected from fees for solid waste collection, treatment and disposal and from fees for wastewater collection, treatment and management is indirectly obtained from National Accounts' data for entities belonging to subsectors "S11001 - Public non-financial corporations" and "S13 - General government". It should be noticed that several integrated waste management systems operating in the country are managed by entities that do not belong to the General Government sector. However, these entities are licensed by the Portuguese Environmental Agency, where they were given a mandate to assume a role that should be the responsibility of the Government. Thus, the revenues collected for the management of each system by those entities are considered to be an environmentally related fee.

Regarding the fees for solid waste collection, treatment and disposal and for wastewater collection, treatment and management collected by entities outside general government sector, those were now included in the current exercise which determined changes in the whole series for environmentally related fees.

In the specific case of fees for solid waste collection, treatment and disposal, these are determined taking into account the revenue of CPA product 38 (Waste collection, treatment and disposal services; materials recovery services) obtained by entities classified in NACE 36 (Water collection, treatment and supply), in NACE 37-38-39 (Sewerage; Waste collection, treatment and disposal activities; materials recovery; Remediation activities and other waste management services) and in NACE 841 (Administration of the State and the economic and social policy of the community).

Regarding the fees for wastewater collection, treatment and management, these are determined considering the revenue of CPA product 37 (Sewerage services; sewage sludge) obtained by entities classified in NACE 36 (Water collection, treatment and supply), in NACE 37-38-39 (Sewerage; Waste collection, treatment and disposal activities; materials recovery; Remediation activities and other waste management services) and in NACE 841 (Administration of the State and the economic and social policy of the community).
