

14 February 2018

Labour Cost Index

4th quarter of 2017

In the 4th quarter of 2017, the Labour Cost Index increased by 4.7% when compared to the same quarter in 2016. In 2017, it increased by 2.5% from 2016

The Labour Cost Index (LCI) working days adjusted increased by 4.7% in the 4th quarter of 2017, compared with the same period in 2016. In the previous quarter, it was recorded a year-on-year decrease of 0.9%.

In terms of the annual average, the Labour Cost Index increased by 2.5% in 2017, due to the rise of 2.4% in wage costs and of 2.7% in other labour costs. In the previous year, the LCI had recorded an increase of 1.4%, corresponding to rates of change of 1.6% in the wage costs and of 0.6% in the other costs.

By economic activity, in 2017, the LCI recorded an annual increase of 1.7% in the activities from sections B to N and an increase of 3.6% in the activities from sections O to S (which include the Public Administration).

1. Labour Cost Index and components

In the 4th quarter of 2017, the LCI recorded a year-on-year increase¹ of 4.7% due to increases of 4.7% in wage costs and of 4.9% in other labour costs (Fig. 1).

For that evolution also contributed the increases of 5.0% in the average cost per employee and of 0.2% in the number of hours actually worked per employee (Fig. 2).

Figure 1: LCI year-on-year rate of change by component of the index
(working days adjusted data)

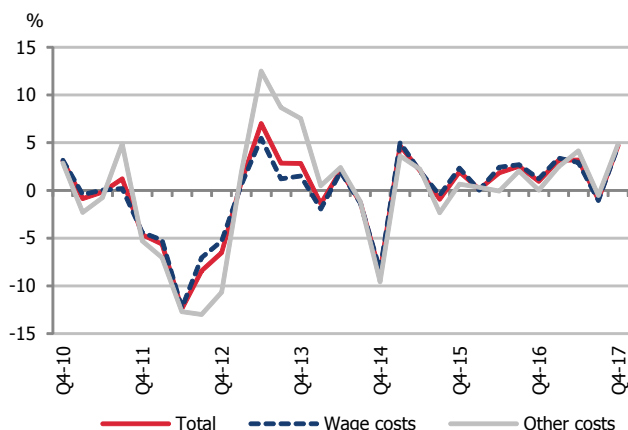

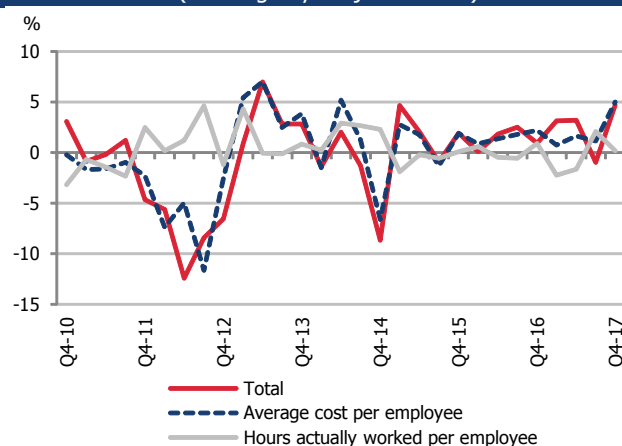

Figure 2: LCI year-on-year rate of change by source of variation of the index
(working days adjusted data)

¹ The data analysed in this Press Release are working days adjusted. The raw data are available in the annex tables and at the Official Statistics Portal. Unless otherwise stated, the rates of change mentioned in this Press Release are year-on-year rates of change (from the same quarter of the previous year).

In 2017, the LCI was up by 2.5% compared to the previous year due to increases of 2.4% in wage costs and of 2.7% in other costs. This evolution also resulted from an increase of 2.2% in the average labour cost per employee and a decrease of 0.5% in the number of hours actually worked per employee.

In 2016, the LCI recorded an increase of 1.4%, corresponding to increases of 1.6% and of 0.6% in wage costs and in other costs, respectively. The average labour cost per employee grew by 1.6% and the number of hours actually worked per employee increased by 0.1%.

2. Sectors of economic activity

For the subgroup of economic activities from sections B to N² (which include, in general, the business economy or the private sector of the economy), the LCI increased by 0.6%.

In the remaining economic activities (sections O to S), which include mostly (but not exclusively) the non-business economy of the public sector of the economy, it was recorded a year-on-year increase of 10.7%.

In 2017, the LCI recorded an annual increase of 1.7% in the activities from sections B to N and an increase of 3.6% in the activities from sections O to S.

Sections B to N

In the 4th quarter of 2017, in the activities from sections B to N, compared to the same quarter of 2016:

- the wage costs increased by 0.8% and the other labour costs decreased by 0.1% (Fig. 3);
- the average labour cost per employee increased by 1.9% (Fig. 4);
- the number of hours actually worked per employee increased by 1.2% (Figure 4).

Figure 3: LCI year-on-year rate of change by economic activity (NACE-Rev. 2) in the 4th quarter of 2017
(working days adjusted data)

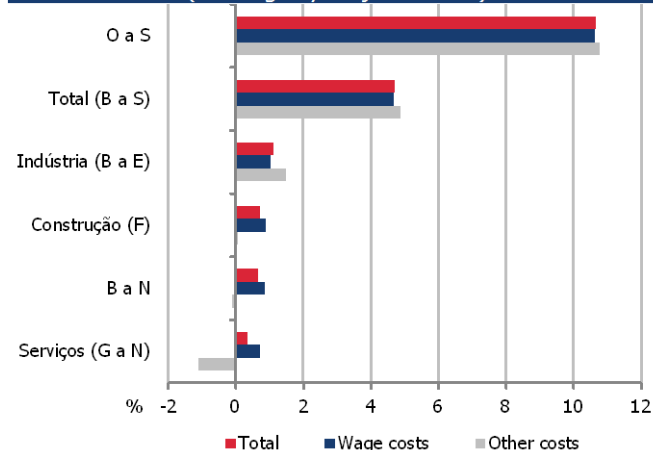

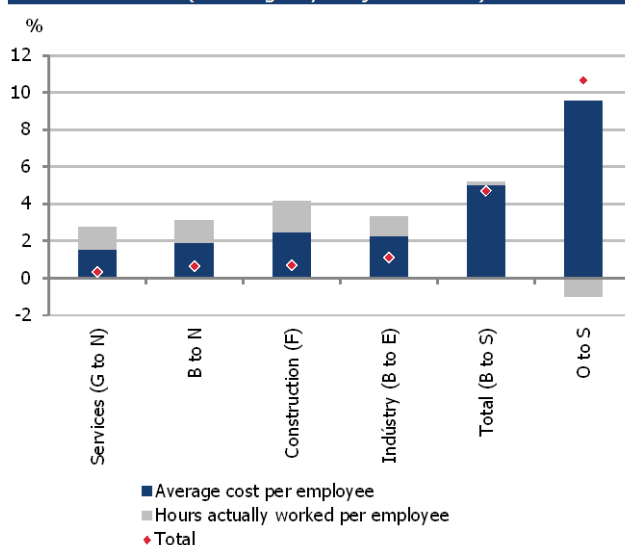

Figure 4: LCI year-on-year rate of change by economic activity (NACE-Rev. 2) in the 4th quarter of 2017
(working days adjusted data)

² The activities' designation is available in the annex tables.

Among the activities from sections B to N, the LCI increased by 1.1% in industry (sections B to E), by 0.7% in construction (section F), and by 0.3% in services (G to N).

In Industry (1.1%):

- the wage costs increased by 1.0% and the other labour costs increased by 1.5%;
- the average cost per employee increased by 2.2%;
- the number of hours actually worked per employee increased by 1.1%.

In Construction (0.7%):

- the wage costs increased by 0.9% and the other labour costs increased by 0.1%;
- the average cost per employee increased by 2.4%;
- the number of hours actually worked per employee increased by 1.7%.

In Services (0.3%):

- the wage costs increased by 0.7% and the other labour costs decreased by 1.1%;
- the average cost per employee increased by 1.6%;
- the number of hours actually worked per employee increased by 1.2%.

In 2017, compared to the previous year, the LCI increased by 2.5% in industry (sections B to E), by 0.7% in construction (section F), and by 1.4% in services (sections G to N).

Sections O to S

In the activities from sections O to S, the LCI recorded an increase of 10.7% in comparison with the same quarter of the previous year. In these activities:

- the wage costs increased by 10.6% and the other labour costs increased by 10.8%. These increases were mainly due to the payment of 50% of Christmas bonuses in November 2017 in the Public Administration, which was not the case in November 2016 (when these bonuses were paid monthly);
- the average cost per employee increased by 9.6%;
- the number of hours actually worked per employee decreased by 1.0%.

In 2017, the LCI recorded an annual increase of 3.6% in the activities from sections O to S.

3. Comparison with the European Union

The latest available information by country on the LCI year-on-year change reports to the 3rd quarter of 2017 and was published by Eurostat in the 19th December of 2017 (Figure 5).

The LCI year-on-year rate of change for the European Union (28 countries) was 2.1%, in the 3rd quarter of 2017.

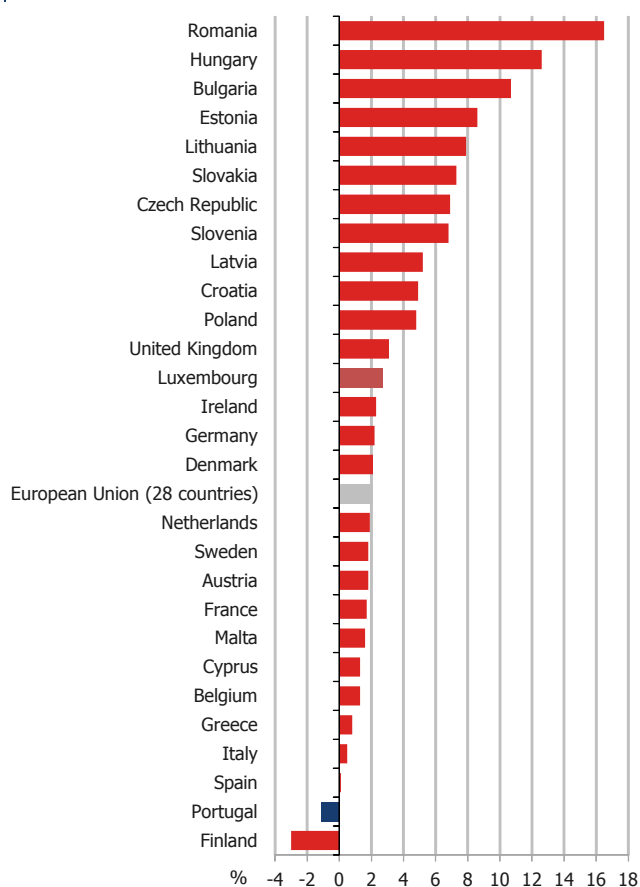

In fifteen countries, the LCI rates of change were larger than the European Union average, with Romania recording the largest LCI increase (of 16.5%).

Denmark recorded the same rate of change of the European Union (2.1%).

In ten other countries, the LCI recorded increases, albeit lower than the European Union average, from 0.1%, in Spain, to 1.9% in the Netherlands.

Portugal registered a year-on-year decrease in the LCI of 1.1%³, as in Finland, of 3.0%.

Figure 5: LCI year-on-year rate of change by European Union Country (28) in the 3rd quarter of 2017
(working days adjusted data)

³ This value has now been revised to -0.9% (as described in the Technical note, page 8).

TECHNICAL NOTE

The Labour Cost Index (LCI) is a short-term indicator that measures quarterly developments in labour costs per hour actually worked (hourly average cost) incurred by the employer. The index is calculated by dividing the average cost per employee by the number of hours actually worked per employee. For this reason, the evolution of these two variables (labour costs and hours worked) contributed to explaining their developments.

Labour costs incurred by the employer include the following:

Wage costs:

- Base wage
- Regular bonuses and allowances
- Irregular bonuses and allowances (holiday bonus, Christmas bonus, end-of-year bonuses/distribution of profits, other irregular bonuses and allowances)
- Payment of overtime
- Payment in kind

Other costs:

- Severance payment
- Employers' legal costs (social security contributions, insurance against accidents and occupational disease)
- Collectively agreed, contractual and voluntary costs (supplementary pension/invalidity benefit, health insurance, life/personal accident insurance, and social benefits paid directly to employees in case of absence on account of sickness)

The LCI is a statistical operation held on a quarterly basis through a sampling survey. Data collection with local units is carried out through an electronic questionnaire (Computer Assisted Web Interviewing - CAWI). By economic activity, the LCI covers Sections B to S of NACE-Rev. 2.

Data on public administration [Sections O (Public administration and defence; compulsory social security) and the public part of Sections P (Education) and Q (Human health and social work activities)] are not obtained through direct collection. These data are estimated by Statistics Portugal from data obtained, among other sources, from the Directorate-General of Budget of the Ministry of Finance. These data are subject to revisions.

The LCI is Laspeyres index.

In order to obtain more information about the LCI calculation, we recommend the consultation of the [methodological note](#) (only in Portuguese) for this statistical operation.

Information selected for publication

This press release analyses changes in the total LCI and respective items: (1) wage costs versus other costs; and (2) average costs per employee versus number of hours actually worked per employee.

Given that the LCI is seasonal, data are presented as year-on-year rates of change, which compare index levels in the current quarter with those for the same quarter a year earlier. The series of index figures are available on the Official Statistics Website.

In order to be in line with the series published by Eurostat, which has changed the LCI reference year from 2008 to 2012, the indices published started to have, since the LCI press release for the 1st quarter of 2015, the year 2012 as the reference year (2012=100). The back series of the indices were recalculated for the period from the 1st quarter of 2008 to the 4th quarter of 2014.

With the purpose of eliminating the effects resulting from different numbers of working days in the same quarters of different years (Easter and other movable feasts), the series analysed are adjusted for working days. Raw series, not adjusted for working day effects, are available in the annex tables and on the Official Statistics Portal.

(to be continued)

(continuation)

Revisions

The data published in this release concerning the last quarters are subject to revisions. These revisions result, on one side, from the inclusion of information for the last quarter sent lately by some establishments of the LCI sample and, on the other side, from updates in the data for the last quarters obtained from the Directorate-General of Budget.

The impact of those revisions, measured by the difference between the year-on-year rates of change published today and those published for the 3rd quarter of 2017 in the Press Release "Labour Cost Index – 3rd quarter of 2017", is available in the following table:

Revision of the LCI year-on-year rates of change published in the 3 rd quarter of 2017
