

23 March 2018

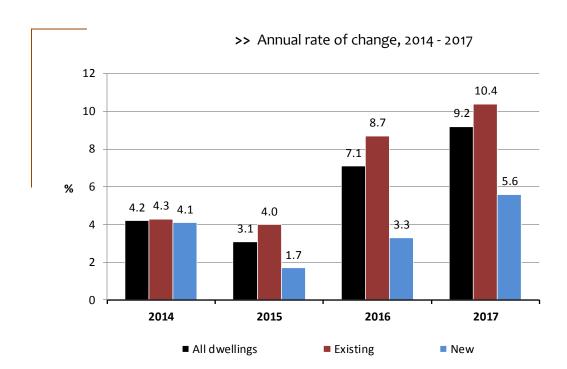

House Price Index 4th Quarter of 2017

House prices increased 9.2% in 2017

In 2017, the House Price Index (HPI) increased 9.2% when compared with the previous year. This rate of change exceeded in 2.1 percentage points (p.p.) the 2016 growth rate. The increase in prices was more evident for existing dwellings (10.4%) than for new dwellings (5.6%).

The HPI rose 10.5% in the fourth quarter of 2017, 0.1 p.p. more than in the previous quarter. Existing dwellings continued to exhibit throughout 2017 higher price increases as compared to new dwellings (11.8% and 5.9%, respectively). On a quarter-to-quarter basis, the HPI increased 1.2% (3.5% in the third quarter).

A total of 153,292 dwellings were transacted in 2017, a number that represents an increase of 20.6% when compared to the last year. In this period, the value of transactions totalled 19.3 billion euros, 30.6% more than in 2016.

1. House Price Index

In 2017, the HPI presented an annual rate of change of 9.2%, 2.1 p.p. above the rate of change in 2016. Price increases continued to be observed for both types of properties. In this period, existing dwellings increased 10.4%, almost the twice as the growth rate that was observed for new dwellings (5.6%).

In the fourth quarter of 2017, the annual change of HPI reached 10.5%, the highest rate in 2017 (more 0.1 p.p. compared to the third quarter of 2017). The acceleration of prices came exclusively from existing dwellings. In the last three months of the year, the prices of existing dwellings grew 11.8%, 0.3 p.p. more than in the previous quarter. When compared with the same period of the previous year, the annual change for new dwellings was 5.9% (-1.0 p.p. than the third quarter of 2017).

On a quarter-to-quarter basis, the HPI increased 1.2%, roughly a third of the previous quarter observed price increase. By market segment, existing dwelling prices rose 1.5% (4.1% in the third quarter), a rate of change that was higher than for new dwellings, which registered a residual growth of 0.04%.

2. Number and value of house sales

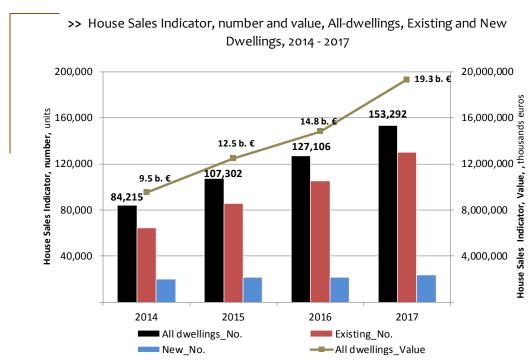

In 2017, the house sales indicator totalled 153,292 transactions, a new maximum in the available series. The housing market transacted 26,186 more dwellings than in 2016 (20.6%). Existing dwellings represented the majority of the transactions, increasing 1.5 p.p. in the relative weight of the total transacted sales value (84.5% of the total). The increase in the relative weight of existing dwellings was due to the fact that this market segment registered a rate of change of 22.8% in the number of transactions, a figure that was much higher than the one observed for new dwellings (9.8%).

The value of transacted dwellings exceeded 19.3 billion Euros in 2017, 4.5 billion Euros more than the previous year. In the last four years, while the total sales value more than doubled, the number of transactions increased by 82%.

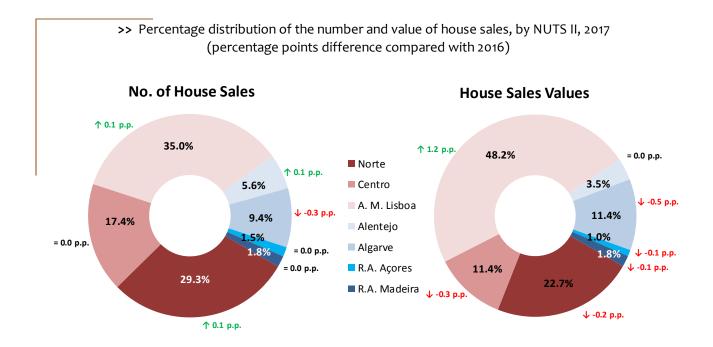

The following figure depicts the evolution of the number and value of sales of dwellings in the last four years.

The next figure shows the distribution of the number and value of house sales by NUTS II region for 2017.

In 2017, the two regions with the highest number of transactions (Área Metropolitana de Lisboa and Norte) concentrated 64.3% of the total number of transactions, which is a maximum in the series available. Together with these two regions, the Alentejo was the other region that increased (0.1 p.p.) its relative regional quota last year. The Algarve region was the only that declined 0.3 p.p. in its relative regional quota.

In value, the Área Metropolitana de Lisboa and the Norte regions continued to observe a concentration of sales, reaching 70.9% in 2017, 1.0 p.p. more than in 2016. Of the two regions mentioned above, the Área Metropolitana de Lisboa was the only to have seen its relative importance in terms of total value increasing in the last four years (from a relative share of 41.9% in 2013 to 48.2% in 2017). The Algarve and Centro regions were the ones that have seen their relative importance in the total sales value declining the most in 2017 (with -0.5 p.p. and -0.3 p.p., respectively).

EXPLANATORY NOTES

House Price Index

The House Price Index (HPI) measures the evolution of the acquisition prices of the dwellings purchased in the residential market in Portugal. The HPI is compiled using anonymised fiscal administrative information provided by the Tax and Customs Authority on the Municipal Property Transfer Tax (IMT) and the Municipal Property Tax (IMI).

The HPI is derived through the estimation of a functional relationship between the logarithm of the transaction prices of dwellings and their characteristics (e.g., area, location), being included in the probabilistic models of hedonic prices. The estimation is performed quarterly with data from two adjacent quarters. With this approach, it is possible to estimate the rate of change of prices controlling for changes in the quality of dwellings.

The HPI is a chained index with base 100 = 2015. The followed methodology enables the weighting structure to be updated annually with information on the value of dwelling transactions in the year immediately preceding the year in which the index refers.

Quarterly rate

The quarterly rate is the change in the index of a certain quarter compared with the index of the previous quarter expressed as a percentage. Although up-to-date, this measure can be affected by seasonal and other effects.

Annual rate

The annual rate is the change in the index of a certain quarter compared with the index of the same quarter in the previous year expressed as a percentage. In the presence of a stable seasonal pattern, seasonal effects do not influence this measure.

4-quarter average rate

The rolling 4-quarter average rate is the change in the average index of one year compared with the average index of the previous year expressed as a percentage. This moving average is less sensitive to transient changes in prices.

New dwellings

Dwellings that, at the time of the transaction, had never been used for residential purposes.

Existing dwellings

Dwellings that, at the time of the transaction, had already been used for residential purposes.

House Sales Indicator

Indicator that estimates the number of housing transactions carried out in a quarter for the national total and the segments of new homes and existing homes. The compilation of this statistic is based on information from the IMT and is based on transactions of urban articles. In calculating this indicator are not considered, similarly to what happens with the estimation of the rate of change in prices between two successive quarters, transaction parts of dwellings (i.e., are considered only transactions of dwellings in full).

The number of sales is available for the whole country and for the second level of geographical breakdown, as defined by the Nomenclature of Territorial Units for Statistics (NUTS II).

House Value Indicator

As the indicator of the number of sales, this statistic is based on information taken from the IMT on paid real estate tax. Following what was defined for the house sales indicator, the total value of transactions does not cover transactions of parts of dwellings.

The value of sales is also available to the second level of geographical breakdown, as defined by NUTS II.

Additional information

Further methodological information on the HPI is available on the National Statistics Institute website http://smi.ine.pt/DocumentacaoMetodologica/Detalhes/1464; available only in Portuguese).

Next press release

The HPI of the 1st quarter of 2018 is expected to be released on June 22nd, 2018.
