

Monthly Economic Survey February 2019

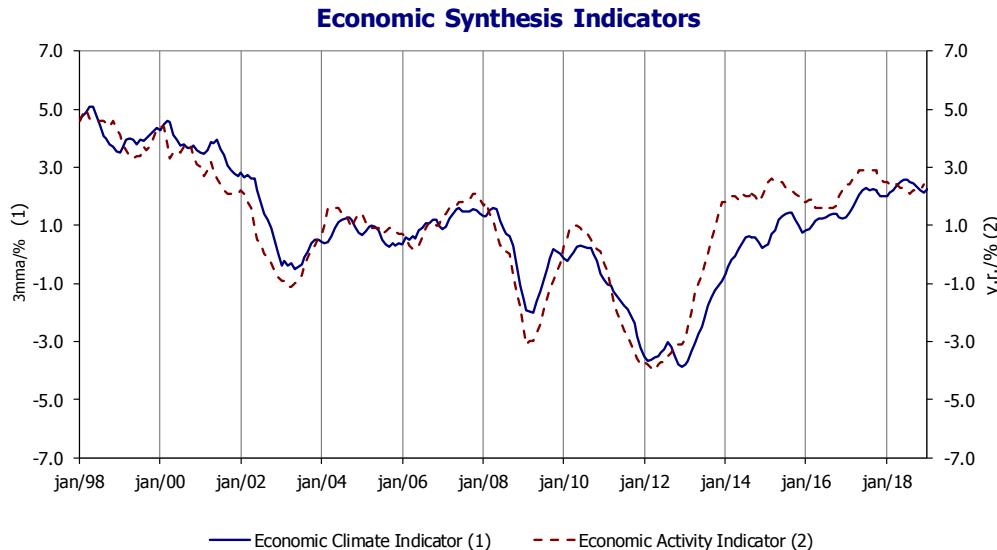

Economic activity indicator and economic climate indicator increase

In February, the consumer confidence and the economic sentiment indicators decreased in the Euro Area (EA). In the same month, the raw materials and oil prices presented monthly change rates of 1.5% and 8.3%, respectively (0.1% and 3.3% in January).

In Portugal, the economic activity indicator, available until January, and the economic climate indicator, already available for February, increased. The quantitative indicator of private consumption slightly decelerated in January due to the lower positive contribution of the non-durable consumption component. In the same month, the Gross Fixed Capital Formation (GFCF) indicator increased, reflecting the more intense positive contributions of all components, machinery and equipment, construction and transport material components. In nominal terms, exports and imports recorded year-on-year change rates of 0.9% and 12.5% in January, respectively (1.4% and 8.7% in December). Considering the economic activity from the production perspective, in nominal terms, there was stagnation in industry and a slowdown in services in January, and in real terms, a reduction of industry production index and a slowdown in the construction production index.

The provisional unemployment rate (15 to 74 years old), seasonally adjusted, was 6.7% in January, 0.1 percentage points above the definitive rate observed in December and in October 2018 and 1.1 percentage points below the January 2018 rate. The estimate for the employed population (15 to 74 years old), also seasonally adjusted, registered a year-on-year growth rate of 1.5% (identical rate in the two preceding months) and a 0.2% rate of change comparing with the previous month.

The year-on-year change rate of the Consumer Price Index (CPI) was 0.9% in February (0.5% in January), with a 0.5% change rate in the goods component (-0.3% in the previous month) and 1.6% in the services component for the third consecutive month.

Based on information available up to March 18, 2019.

NOTES

With exception of situations duly identified, the values presented in tables and graphs and others that also serve for the analysis are, in the case of quantitative series, year-on-year rates of change (y.r.) under three-month moving average (3-mma) or, in the case of qualitative series, 3-mma of seasonally adjusted values (s.a.) or of effective values (e.v.). Annual information correspond to 12-mma, with the exception of variables presented as y.r. on stocks, where the annual value corresponds to the variation of the balance at the end of the year. Annualised variation (a.v.). Weight (w.).

Balances: differences between the percentage of respondents giving positive and negative replies.
