BUSINESS AND CONSUMER SURVEYS
September 2021

CONSUMER CONFIDENCE INDICATOR INCREASES AND ECONOMIC CLIMATE INDICAT DECREASES

The Consumer confidence indicator¹ increased in August and September², after decreasing in July, approaching the pre-pandemic values registered in the beginning of 2020.

The economic climate indicator³ decreased in September, presenting an irregular behavior since July, when the recovery observed since March was interrupted. Confidence indicators decreased in September in Construction and Public Works, in Trade and in Services, especially in the latter case, while in Manufacturing Industry, the indicator increased, contrary to the decrease observed in the previous month.

Figure 1. Economic climate indicator
- Manufacturing Industry, Construction and Public Works, Trade and Services-

¹ This analysis is based on series of monthly effective values and not on moving averages, as was usual (see box at the end of the press release).

² The collection period (see final notes) of the consumer survey occurred from 01 to 16 of September (working days), in the case of the consumer survey, and from 01 to 23 of September in the case of business surveys.

³ The economic climate indicator summarizes the balances of business surveys' questions.

Consumer Survey

The consumer confidence indicator increased in August and September, after decreasing in the previous month, approaching the pre-pandemic values registered in the beginning of 2020. This evolution was due to the positive contribution of the perspectives regarding the future evolution of the country's economic situation, and of the opinions on the past and future evolution of households' financial situation. On the contrary, expectations about the future evolution of households' spending on major purchases contributed negatively.

The balance of perspectives regarding the future evolution of the country's economic situation increased in the last two months, significantly in August, surpassing for the first time since the beginning of the pandemic the levels registered in 2019 and in the first months of 2020.

The balance of expectations about household's financial situation increased in August and September, following the decline recorded in June and July.

Figure 2. Consumer confidence indicator

Figure 3. Opinions and expectations about household's financial situation

Manufacturing Industry Survey

The Manufacturing Industry confidence indicator increased in September, after decreasing in the last two months. This evolution reflected the positive contributions of the firm's production perspectives over the next three months and the opinions on the evolution of the overall order books in the last three months, more intense in the former case, while the opinions on the current stocks of finished products presented a negative contribution.

The indicator increased in Consumer Goods and Intermediate Goods and decreased in Investment Goods.

The balance of opinions on current overall order books increased in the last two months, slightly in September, after the decrease recorded in July. Opinions regarding domestic order books, considering firms with production oriented to the domestic market, recovered in the last two months, tenuously in September, after deteriorating in June and July. On the contrary, the opinions of export order books, considering firms with production oriented to the foreign market, decreased in September.

Figure 4. Manufacturing industry confidence indicator

Figure 5. Opinions on current overall order books

Construction and Public Works Survey

The Construction and Public Works confidence indicator decreased slightly in September, after increasing significantly in August. The decrease in the last month reflected the negative contribution of the perspectives on employment component, since the balance of opinions on current order books have increased.

The confidence indicator decreased in the division of Construction of Buildings and increased in the divisions of Civil Engineering and Specialized Construction Activities.

The balance of opinions on the firm's activity increased in the last two months, after decreasing in July, reaching the maximum since January 2020.

Figure 6. Construction and Public Works confidence indicator

Figure 7. Construction and Public Works confidence indicators by NACE divisions

Trade Survey

The Trade confidence indicator decreased in September, after increasing in the previous month. This evolution reflected the negative contribution of the opinions on the volume of sales and of the perspectives of the firm's activity over the next three months, more intense in the former case, while the opinions on current volume of stocks contributed positively.

The opinions on the volume of sales deteriorated sharply in September, after reaching the maximum in the previous month since February 2019. Furthermore, the balance of perspectives of the firm's activity over the next three months decreased slightly, after the increase in August.

By subsector, the confidence indicator decreased significantly in Wholesale Trade, and increased in Retail Trade.

Figure 8. Trade confidence indicator

Figure 9. Perspectives on business activity (sales) over the next three months

Services Survey

The Services' confidence indicator decreased in September, after having increased in August, suspending the upward profile started in June 2020. The behaviour of the indicator resulted from the negative contribution of the perspectives on the evolution of the order books and the opinions on the evolution of the business situation, while the opinions on the evolution of the order books contributed positively.

In September, the confidence indicators decreased in four of the eight sections, with emphasis on the sections of Information and communication activities and Accommodation and food service activities.

The balance of perspectives on the evolution of demand decreased in September, after having increased in the previous month, extending the downward path started in June.

METHODOLOGICAL NOTE

The Business and Consumer Qualitative Surveys published by Statistics Portugal are developed in the framework of the harmonized EU Business and Consumer Surveys Programme of the European Commission (EC) DG-ECFIN (Directorate-General for Economic and Financial Affairs) and are financially supported in the framework of the agreement signed between these two institutions. The questionnaires are harmonized among the European countries, as well as the respective confidence indicators' methodology. The surveys' results are sent to the EC in effective values, and, therefore, the seasonally adjusted values published by the EC are computed by this entity and presented without using three months moving averages. The seasonal adjustment method used by the EC is available on the user guide, accessible in:

http://ec.europa.eu/economy_finance/db_indicators/surveys/documents/bcs_user_guide_en.pdf

The seasonal adjustment uses the X13-Arima method (combination of moving averages process and auto-regressive integrated moving average models) developed in the JDemetra⁴, software provided by Eurostat. This application relies on the use of probabilistic models to correct seasonal effects from the original series. The seasonal treatment is updated for monthly and quarterly series in January, for consumer survey, and in May, for business surveys, which might result on a revision of the series previously published.

The use of moving averages smoothes out the series by removing the irregular movements, allowing the detection of the short-term trends. Since the average is not centered (the information is used to analyze the evolution of the last month) there is a small lag compared with the trend that is supposed to detect. In order to compare the difference between original and moving average series, the graphical representation of the confidence indicators presents both types of series.

The balances of the questions are the difference between the positive and negative answers, that is $\text{Balance} = \% \text{answer}(+) - \% \text{answer}(-)$. In the Consumer Survey, there are questions with more than one option of positive/negative answer. In these cases, to the most positive/negative answers is given the weight 1 and to the others the weight 0.5, that is $\text{Balance} = [\% \text{answer}(++) * 1 + \% \text{answer}(+) * 0.5] - [\% \text{answer}(--) * 1 + \% \text{answer}(-) * 0.5]$. The percentage of answers that correspond to "equal" is not considered.

The analysis of this press release is based on monthly series of effective values (raw or seasonally adjusted data), which allows for a clearer identification of very short-term movements, particularly relevant in the context of worsening impacts of the COVID-19 pandemic. The monthly series in three-months moving average (3mma) and the quarterly series in two-quarters moving averages (2qma) are available in the excel file that supports this press release.

⁴ JDemetra+ is available for download at https://ec.europa.eu/eurostat/cros/content/software-jdemetra_en.

INFORMATION ON DATA COLLECTION

In the results obtained from business and consumer surveys for the collection of September 2021, the data collecting period occurred from 01 to 16 September in the case of the consumer survey, with 1187 responses obtained (telephone interviews) and from 01 to 23 September for business surveys ([Webing](#)).

The distribution of the number of responses by data collection's months to the consumer is presented in the next figure.

Figure 18. Consumer Survey - Number of responses by data collection's months

In the context of the COVID-19 pandemic, the response and weighted response rates for business surveys observed in April 2020, and in particular in May 2020, were lower than the usual pattern, with a greater impact on services survey rates.

Figure 19. Response and weighted response rates

Business Surveys	Response Rate				Weighted Response Rate ⁽²⁾			
	2020 ⁽¹⁾	July 2021	August 2021	September 2021	2020 ⁽¹⁾	July 2021	August 2021	September 2021
Manufacturing Industry	86.0%	86.8%	83.0%	88.3%	93.0%	93.6%	92.7%	95.1%
Construction and Public Works	83.9%	83.8%	83.7%	86.0%	84.7%	87.4%	88.7%	90.2%
Trade	87.2%	87.8%	87.5%	88.6%	93.9%	94.2%	88.6%	92.8%
Services	84.2%	85.6%	84.6%	86.3%	92.4%	84.0%	72.4%	76.8%

⁽¹⁾ Annual average.

⁽²⁾ Corresponds to the ratio between the turnover of the firms that answered to the survey and the turnover of all the firms in the sample.

The following graphs show the distribution of the number of responses by data collection's months to the business surveys.

Figure 20. Manufacturing Industry Survey - Number of responses by data collection's months

Figure 21. Construction and Public Works - Number of responses by data collection's months

Figure 22. Trade Survey - Number of responses by data collection's months

Figure 23. Services Survey - Number of responses by data collection's months

It should also be noted that the representativeness of the branches of activity covered by Business Surveys, considering the Gross Added Value (GVA) at current prices (Final Annual National Accounts 2019) as the economic variable, is as follows:

Figure 24. Weight of the GVA of the branches

Qualitative Business Surveys	Weight of the GVA of the branches of each survey in the total GVA of the economy
Manufacturing Industry	13.7%
Construction and Public Works	4.4%
Trade	13.1%
Services	38.1%

ECONOMIC CLIMATE INDICATOR

Synthetic Indicator estimated using balances of questions from the Manufacturing Industry, Trade, Construction and Public Works and Services Surveys. The method for this indicator uses the factor analysis and the estimated series (the common component) is calibrated using the GDP change rates. The questions that integrate the indicator are:

Qualitative Manufacturing Industry survey

- How has your production developed over the past 3 months? It has... 1. + increased; 2. = remained unchanged; 3. - decreased.
- Do you consider your current overall order books to be...? 1. + more than sufficient (above normal); 2. = sufficient (normal for the season); 3. - not sufficient (below normal).
- Do you consider your current export order books to be...? 1. + more than sufficient (above normal); 2. = sufficient (normal for the season); 3. - not sufficient (below normal).
- How do you expect your production to develop over the next 3 months? It will... 1. + increase; 2. = remain unchanged; 3. - decrease. (seasonally adjusted)

Qualitative Trade survey

- How has (have) your business activity (sales) developed over the past 3 months? It has... (They have...) 1. + improved (increased); 2. = remained unchanged; 3. - deteriorated (decreased). (seasonally adjusted)
- How do you expect your orders placed with suppliers to change over the next 3 months? They will... 1. + increase; 2. = remain unchanged; 3. - decrease. (seasonally adjusted)
- Your business activity is currently...: 1. + more than sufficient; 2. = sufficient; 3. - not sufficient.
- How do you expect your business activity (sales) to change over the next 3 months? It (They) will... 1. + improve (increase); 2. = remain unchanged 3. - deteriorate (decrease). (seasonally adjusted)

Qualitative Construction and Public Works survey

- How has your building activity developed over the past 3 months? It has...; 1. + increased; 2. = remained unchanged; 3. - decreased.
- Do you consider your current overall order books to be...?: 1. + more than sufficient (above normal); 2. = sufficient (normal for the season); 3. - not sufficient (below normal).
- How do you expect your firm's total employment to change over the next 3 months? It will...; 1. + increase; 2. = remain unchanged; 3. - decrease.

Qualitative Services survey

- How has your business situation developed over the past 3 months? It has... 1. + improved; 2. = remained unchanged; 3. - deteriorated. (seasonally adjusted)
- How has demand (turnover) for your company's services changed over the past 3 months? It has... 1. + increased; 2. = remained unchanged; 3. - decreased. (seasonally adjusted)
- How do you expect the demand (turnover) for your company's services to change over the next 3 months? It will...1. + increase; 2. = remain unchanged; 3. - decrease. (seasonally adjusted)

SECTORIAL CONFIDENCE INDICATORS

The confidence indicators (CI) are the result of the arithmetic average of balance of the following questions:

Manufacturing Industry confidence indicator

- Do you consider your current overall order books to be...? 1. + more than sufficient (above normal); 2. = sufficient (normal for the season); 3. - not sufficient (below normal).
- How do you expect your production to develop over the next 3 months? It will... 1. + increase; 2. = remain unchanged; 3. - decrease.
- [Inverted Sign] Do you consider your current stock of finished products to be...? 1. + too large (above normal); 2. = adequate (normal for the season); 3. - too small (below normal).

Trade confidence indicator

- How has (have) your business activity (sales) developed over the past 3 months? It has... (They have...) 1. + improved (increased); 2. = remained unchanged; 3. - deteriorated (decreased).
- How do you expect your business activity (sales) to change over the next 3 months? It (They) will... 1. + improve (increase); 2. = remain unchanged 3. - deteriorate (decrease).
- [Inverted Sign] Do you consider the volume of stock you currently hold to be...? 1. + too large (above normal); 2. = adequate (normal for the season); 3. - too small (below normal).

Construction and Public Works confidence indicator

- Do you consider your current overall order books to be...?: 1. + more than sufficient (above normal); 2. = sufficient (normal for the season); 3. - not sufficient (below normal).
- How do you expect your firm's total employment to change over the next 3 months? It will...; 1. + increase; 2. = remain unchanged; 3. - decrease.

Services confidence indicator

- How has your business situation developed over the past 3 months? It has... 1. + improved; 2. = remained unchanged; 3. - deteriorated.
- How has demand (turnover) for your company's services changed over the past 3 months? It has... 1. + increased; 2. = remained unchanged; 3. - decreased.
- How do you expect the demand (turnover) for your company's services to change over the next 3 months? It will... 1. + increase; 2. = remain unchanged; 3. - decrease.

CONSUMER CONFIDENCE INDICATOR

The consumer confidence indicator results of the arithmetic average of the balances of the following questions:

- How has the financial situation of your household changed over the last 12 months? It has...1. ++ got a lot better; 2. + got a little better; 3.= stayed the same; 4.- got a little worse; 5. -- got a lot worse; 6. N don't know.
- How do you expect the financial position of your household to change over the next 12 months? It will...1. ++ get a lot better; 2. + get a little better; 3.= stay the same; 4.- get a little worse; 5. -- get a lot worse; 6. N don't know.
- How do you expect the general economic situation in this country to develop over the next 12 months? It will... 1. ++ get a lot better; 2. + get a little better; 3.= stay the same; 4.- get a little worse; 5. -- get a lot worse; 6. N don't know.
- Compared to the past 12 months, do you expect to spend more or less money on major purchases (furniture, electrical/electronic devices, etc.) over the next 12 months? I will spend...1. ++much more; 2. + a little more; 3.- a little less; 4. -- much less; 5. N don't know.

ABBREVIATIONS

Bal: Balances correspond to weighted difference between the percentages of positive and negative responses.

EV: Effective Values.

SA: Seasonally Adjusted values.

3MMA: Three-Months Moving Average.

2QMA: Two-Quarters Moving Average

Next monthly press release – October 28, 2021
