

13 May 2022
LABOUR COST INDEX
1st quarter of 2022

THE LABOUR COST INDEX INCREASED BY 1.1% IN THE 1st QUARTER OF 2022

In the 1st quarter of 2022, the Labour Cost Index (LCI) recorded a year-on-year increase of 1.1%. In the previous quarter, it had increased 2.6%.

The wage costs (per hour actually worked) increased by 0.4%, and the other labour costs (also per hour actually worked) increased by 3.8%, compared with the same period of the previous year.

The year-on-year development of the LCI resulted from the increase of 3.1% in the average cost per employee and the growth of 2.6% in the number of hours actually worked per employee. The increase of the former component took place in all the economic activities, with the lowest variation being recorded in the Public Administration (1.8%) and the highest being observed in construction (4.7%) and in services (4.4%). The hours actually worked per employee recorded an increase in all the economic activities, with the exception of construction, where it decreased by 1.7%. The largest increase was observed in the Public Administration (4.0%). Therefore, the LCI increased in all the economic activities, having only decreased in the Public Administration (1.9%).

1. Labour Cost Index and components

In the 1st quarter of 2022, the LCI, that measures the labour costs per hour actually worked, increased by 1.1% compared with the same quarter of 2021 (it had increased by 2.6% in the preceding quarter)¹.

The wage costs (per hour actually worked) increased by 0.4% (2.6% in the previous quarter) and the other labour costs (also per hour actually worked) increased by 3.8% (2.5% in the previous quarter) (Figure 1)².

In the 1st quarter of 2022, the wage costs recorded a more pronounced increase in construction (6.5%) while in the Public Administration it was observed a decrease of 2.2%. In the preceding quarter, except for services, the wage costs had registered increases in all the economic activities.

The non-wage costs recorded higher variations than those observed in the wage costs, except for the Public Administration, where these costs decreased more (-0.4% vs. -2.2%). The most accentuated increase of the

¹ It should be noted that the wage costs considered in the LCI computation include those that were partially supported by Social Security in the scope of the employment protection measures, with the implementation, in particular, of the simplified layoff regime in the pandemic context. These amounts cannot be identified on the primary data used to calculate the LCI. Therefore, although from the economy perspective the LCI displays the behaviour of the hourly labour costs, in the companies' perspective these costs tend to be overestimated during this regime period.

² The data analyzed in this press release are working days adjusted. The raw data are available in the annex tables and at the Official Statistics Portal.

other costs was a result of the recovery of the payment of social contributions by the enterprises that in the same quarter of the previous year had joined the simplified layoff regime or the extraordinary support for progressive resumption of activity.

Figure 1. LCI year-on-year rate of change by components

(working days adjusted data)

Source: Statistics Portugal, Labour Cost Index – 1st quarter of 2022.

The decrease of the wage and the non-wage costs in the Public Administration was due to the increase in the number of hours actually worked per employee in these activities. On the other hand, the strong increase in those costs in construction was explained by the reduction in the number of hours actually worked per employee.

The increase of the LCI was explained by the growth of 3.1% in the average cost per employee (it had increased by 2.4% in the preceding quarter) and of 2.6% in the number of hours actually worked (it had increased by 0.2% in the previous quarter) (Figure 2).

The average cost per employee recorded a more pronounced increase than that observed in the preceding quarter in most of the economic activities, except in industry, that registered a smaller increase (2.5% vs. 3.6%). The increases recorded in the Public Administration have been lower than those in the remaining activities since the 1st quarter of 2021.

Except for construction, the number of hours actually worked per employee increased in all the economic activities, in particular in the Public Administration sector (4.0%)

In the same quarter of the previous year, a reduction of the number of hours actually worked per employee was recorded in all the economic activities, essentially explained by the total or partial closure of the companies, set by legislative procedures, or even due to the reduction of the normal working period, as a result of the drop in turnover.

2. Sectors of economic activity

In the 1st quarter of 2022, for the subgroup of the economic activities belonging to sections B to N (which include, in general, the business economy of the private sector of the economy), the LCI increased by 2.7%.

In the remaining economic activities (sections O to S), which include mostly (but not exclusively) the non-business economy of the public sector of the economy, the LCI recorded a year-on-year decrease of 1.9%.

Sections B to N

In the 1st quarter of 2022, in the activities from sections B to N, compared with the same quarter of 2021, it was observed that:

- the wage costs increased by 1.8% and the other labour costs increased by 5.9% (Figure 3);
- the average labour cost per employee increased by 3.9% (Figure 4);
- the number of hours actually worked per employee increased by 1.8% (Figure 4).

Among the activities from sections B to N, the LCI increased by 2.0% in industry (sections B to E), by 6.5% in construction (section F), and by 2.5% in services (sections G to N).

In Industry (2.0%):

- the wage costs increased by 1.9% and the other labour costs increased by 2.5%;
- the average cost per employee increased by 2.5%;
- the number of hours actually worked per employee increased by 0.5%.

In Construction (6.5%):

- the wage costs increased by 6.5% and the other labour costs increased by 6.8%;
- the average cost per employee increased by 4.7%;
- the number of hours actually worked per employee decreased by 1.7%.

In Services (2.5%):

- the wage costs increased by 1.2% and the other labour costs increased by 7.6%;
- the average cost per employee increased by 4.4%;
- the number of hours actually worked per employee increased by 2.9%.

Sections O to S

In the 1st quarter of 2022, in the activities from sections O to S, the LCI recorded a decrease of 1.9%. In these activities:

- the wage costs decreased by 2.2% and the other labour costs decreased by 0.4%;
- the average cost per employee increased by 1.8%;
- the number of hours actually worked per employee increased by 4.0%.

3. Comparison with the European Union

The latest available information by country on the LCI year-on-year rate of change reports to the 4th quarter of 2021 and was published by Eurostat on the 18th of March of 2022 (Figure 5).

The LCI year-on-year rate of change for the European Union (27 countries) was 2.3%, in the 4th quarter of 2021.

Nineteen countries recorded LCI rates of change larger than the European Union average, with Lithuania recording the largest LCI increase (15.3%).

In six countries, the LCI recorded a lower increase than the European Union average, between 0.3% in Italy, and 2.0% in Belgium.

Greece observed a year-on-year decrease of the LCI, of 2.8%.

Portugal recorded a year-on-year increase, of 2.3%.

TECHNICAL NOTE

With the publication of the results for the 1st quarter of 2019, Statistics Portugal started the dissemination of a new series of the Labour Cost Index (LCI), with the base year in 2016, in line with Eurostat's procedure for the Labour Cost Index, whenever new data of the (quadrennial) Labour Cost Survey become available.

With the publication of the results for the 1st quarter of 2020, Statistics Portugal started to include, in the LCI calculation, regarding the information related to the labour costs obtained from administrative sources, data corresponding to the universe of about 386 thousand entities (instead of the actual sample of around 4 100 entities), which declared earnings for a total of 4.2 million workers. The information on hours actually worked continues to be obtained by direct inquiry from the entities that belong to the LCI sample, and no changes were introduced at this level. For the O, P and Q sections of NACE-Rev. 2 estimates of the number of hours actually worked per employee from the Labour Force Survey are used.

The back series for all indices, from the 1st quarter of 2008, are available at the Official Statistics website.

The LCI is a short-term indicator that measures quarterly developments in labour costs per hour actually worked (hourly average cost) incurred by the employer. The index is calculated by dividing the average cost per employee by the number of hours actually worked per employee. For this reason, the evolution of these two variables (labour costs and hours worked) contribute to explaining the development of the LCI.

Labour costs incurred by the employer correspond to that reported by the entities to the Social Security (*Declaração Mensal de Remunerações*) and to the *Caixa Geral de Aposentações (Relação Contributiva)* include the following:

Wage costs:

- Base wage
- Regular bonuses and allowances
- Irregular bonuses and allowances (holiday bonus, Christmas bonus, end-of-year bonuses/distribution of profits, other irregular bonuses and allowances)
- Payment of overtime

Other costs:

- Severance payment
- Employers' legal costs (social security contributions, insurance against accidents and occupational disease)
- Collectively agreed, contractual and voluntary costs (supplementary pension/invalidity benefit, health insurance, life/personal accident insurance, and social benefits paid directly to employees in case of absence on account of sickness)

Quarterly data collection on the hours worked in the enterprises is carried out through an electronic questionnaire (Computer Assisted Web Interviewing - CAWI).

By economic activity, the LCI covers Sections B to S of NACE-Rev. 2.

The LCI is a Laspeyres index.

In order to obtain more information about the LCI calculation, we recommend the consultation of the [methodological note](#) (only in Portuguese) for this statistical operation.

INFORMATION SELECTED FOR PUBLICATION

This Press Release analyses changes in the total LCI and respective items: 1) wage costs versus other costs; and 2) average costs per employee versus number of hours actually worked per employee.

Given that the LCI is seasonal, data are presented as year-on-year rates of change, which compare index levels in the current quarter with those for the same quarter a year earlier. The series of index figures are available on the Official Statistics website.

With the purpose of eliminating the effects of a different number of working days in similar quarters of different years (Easter and other movable feasts), the series analyzed are adjusted for working days. Raw series, not adjusted for working day effects, are available in the annex tables and at the Official Statistics website.

REVISIONS

The data published in this release concerning the last quarters are subject to revisions. These revisions result from the inclusion of information for the last quarter sent lately by some enterprises of the sample survey on hours worked and from the update of information obtained through administrative sources, namely by data from the *Declaração Mensal de Remunerações* reported by the enterprises to the Social Security.

The impact of those revisions, measured by the difference between the year-on-year rates of change published today and those published for the 4th quarter of 2021 in the Press Release “Labour Cost Index – 4th quarter of 2021”, is available in the following table:

Revision of the LCI year-on-year rates of change published in the 4th quarter of 2021
