CONSUMER PRICE INDEX

November 2009

Consumer Prices down -0.6% in November on a year earlier

The Portuguese Consumer Price Index (CPI) went down -0.6% in November 2009 when compared with November 2008. Excluding energy and unprocessed food, the annual rate remained unchanged (-0.4%). On a monthly basis, the CPI increased to 0.2 (0.0% in October 2009 and -0.6% in November 2008). The CPI 12-month average rate of change decreased to -0.8% in November, less 0.2 percentage points (p.p.) than the previous month.

In November, the Portuguese Harmonised Index of Consumer Prices (HICP) annual inflation rate was -0.8% (-1.6% in October), 1.4 percentage points (p.p.) below the rate estimated by Eurostat for the Euro area.

The annual inflation rate measured by the CPI increased to -0.6% in November 2009, 0.9 p.p. above the observed in the previous month (see figure 1).

The largest downward pressure on the overall annual rate of change came from changes in the prices of Food products.

The annual core inflation rate, which excludes energy components and fresh unprocessed food products, maintained the same value of October (-0.4%). The difference between this indicator and the annual CPI inflation rate decreased to 0.2 p.p. (1.1 p.p. in October).

In November the CPI monthly rate was 0.2%. The main upward contribution to this result came from changes in fuels and lubricants and fish. On the other hand, the negative contributions were mainly due to the decrease in the prices of package holidays and passenger transport by air.

In November 2009, the Portuguese HICP annual rate was -0.8%, up 0.8 p.p. from the previous month. On a monthly basis the HICP inflation rate raised to 0.1% (-0.7% in November 2008). The HICP 12-month average rate lowered to -0.8%.

In October 2009 the gap between the Portuguese and the Euro-area annual rate of change remained unchanged (-1.5 p.p) and it is estimated to be -1.4 p.p. in November 2009 (see figure 2).

(Portugal and the Euro area)

The December 2009 CPI/HICP will be released on January 13th 2010

Consumer Price Index

The Consumer Price Index (CPI) is an indicator showing how the prices of a certain basket of goods and services bought by a “typical” consumer change over time. The CPI has been designed to capture price changes and not to measure price levels. Both the consumption pattern and the goods and services included in the CPI basket were derived from the year 2000 Household Budget Survey and are updated annually with the most recent information on prices and quantities. The CPI is compiled through the aggregation of seven regional price indexes and the goods and services included in the index are grouped according to the COICOP classification.

Table 1: CPI/COICOP Index Divisions

01	Food and non-alcoholic beverages	07	Transports
02	Alcoholic beverages and tobacco	08	Communications
03	Clothing and footwear	09	Recreation and culture
04	Housing, water, electricity, gas and other fuels	10	Education
05	Furnishings, household equipment and routine maintenance of the house	11	Restaurants and hotels
06	Health	12	Miscellaneous goods and services

Monthly rate

The monthly rate is the change in the index of a certain month compared with the index of the previous month expressed as a percentage. Although up-to-date, this measure can be affected by seasonal and other effects.

Annual rate

The annual rate is the change in the index of a certain month compared with the index of the same month in the previous year expressed as a percentage. In the presence of a stable seasonal pattern, seasonal effects do not influence this measure.

12-month average rate

The 12-month average rate is the change in the average index of one year compared with the average index of the previous year expressed as a percentage. This moving average is less sensitive to transient changes in prices.

Core inflation index (all items CPI excluding unprocessed food and energy products)

The core inflation index is compiled by excluding the prices of unprocessed food and energy products from the all-items CPI. The primary objective of this index is to capture the underlying inflation pressures in the economy. In the publication *Síntese Económica de Conjuntura* is released a core inflation indicator based on a different methodological approach (factorial analysis) and, for this reason, it is possible that differences between the values shown by the two measures exist.

Harmonised Index of Consumer Prices

The Harmonised Index of Consumer Prices (HICP) is compiled in each member state of the European Union for the purposes of inflation comparisons across EU countries, as required by the Treaty on European Union¹. This index plays an important role as a guideline for the achievement of the European System of Central Banks primary objective: price stability. In 1998, the European Central Bank adopted the HICP as “the most appropriate price measure” for its definition of price stability in the Euro area². More information is available at <http://epp.eurostat.ec.europa.eu/portal/page/portal/hicp/introduction>.
